EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicant's Representative, Dennis Carmen, on June 19, 2008.

2. The application has been amended as follows:

In the specification:

Page 25, line 2, after "of", -- Comparative -- has been added;

line 4, after "in", -- Comparative -- has been added;

line 17, after "in", -- Comparative -- has been added;

last line, after "of", -- Comparative -- has been added.

Page 27, line 6, after "in", -- Comparative -- has been added;

line 10, after "of", -- Comparative -- has been added.

In the claims:

Claims 1-25 have been canceled.

Claim 59 has been rewritten as follows:

-- Claim 59. The process of claim 36, wherein the polyester particles have a degree of crystallinity of at least 25 percent and an It.V. of at least 0.75 dL/g obtained without solid state polymerization, wherein the absolute value of the difference in the It.V. between

Art Unit: 1794

the center and the surface of the polyester particles is 0.20 dL/g or less, and wherein the molded part is a bottle preform. --

Claim 61 has been rewritten as follows:

-- Claim 61: The process of claim 60, wherein the absolute difference between the It.V. of the polyester particles at their surface and at their center is 0.05 dL/g or less.

Claim 104, line 1, "26" has been changed to -- 103 --.

End of Amendment.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance: None of the prior art references of record, singly or combined, teaches or suggests method of making container from polyester by feeding polyester particles into an extrusion zone wherein the difference in intrinsic viscosity between the surface and the center of the particles is at most +0.25 dL/g and the polyester particles are not formed by solid state polymerization. As shown in the specification, polyester particles that are formed by solid state polymerization when subject to melting in the extrusion zone result in difference of viscosity of larger than 0.25 dL/g between the surface and the center of the particles, and the intrinsic viscosity is reduced at a larger rate than polymer particles that are not solid state polymerized as according to the method of the claimed invention. The polyester particles taught by Schiavone (US Patent 6,335,422) have been solid state polymerized before being fed in the extrusion zone (See Schiavone, col. 8, lines 34-36); therefore, the polyester particles do not meet the gradient viscosity as claimed. The Williamson patent (US 5,474,111) and the Stouffer patent (US 5,540,868) do not teach method of making container as required in the instant claims. The EP publication (EP 0661326) teaches a method for preparing polyester articles in which the focus is the acetaldehyde content in the polyester rather than the viscosity difference between the surface and the center of polyester particles.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to H. T. Le whose telephone number is 571-272-1511. The examiner can normally be reached on 9:30 a.m. to 6:00 p.m., Mondays to Fridays.
